## CSWC Operational Period Summary

### 0600 February 15 2018 to 1800 February 15 2018

A narrow bridge in the Tomki Rd. area of Mendocino County is being analyzed by the Corps and County to determine if it is a safe route for fire debris transport. The structure is actually a 100-foot-long flatbed rail car that was turned into a bridge, and is just eight feet, two-inches wide.

# WEATHER OF CONCERN

## Weather of Concern

### Northern California:

- Breezy north winds are expected across the interior of Northern California today.

### Southern California:

- Gusty Santa Ana winds across portions of Ventura and Los Angeles counties. The northeast winds will begin to increase across the mountains late this afternoon or early this evening then will spread into the valleys and coastal late this evening and overnight.
- Winds will peak in strength Friday morning with wind gusts between 40 and 50 MPH (isolated gusts up to 60 MPH) before slowly diminishing Friday afternoon.
- Santa Ana winds will result in elevated fire weather conditions across Ventura and Los Angeles counties.

### Active Weather Warnings, Watches and Advisories by County:

- <https://alerts-v2.weather.gov/counties/CA>

# **WEATHER SYNOPSIS BY REGION**

## **NORTHERN CALIFORNIA**

A dry cold front moved through the Northern California region last night, leaving a northerly wind pattern that will continue into early Saturday. N-NE/offshore winds will be strongest this morning, with widespread gusts from the Cascade-Sierra crest to the coast reaching 30-40 mph. Humidity during this wind event could drop into the upper teens in the interior. There will also be a few hours Friday afternoon where SW-NW winds gust to 30 mph or so over the higher terrain in the far north. A cold front approaching from the north late Saturday will cause SW-NW wind gusts to increase over the higher terrain in the north to 30-40 mph. A southerly wind develop in the Sacramento Valley. The front will move slowly through the region from north to south Saturday night and Sunday. Only far northern and eastern areas will receive light precipitation. Snow levels will start out near 4000 ft, but drop to about 2000 ft as these conditions continue into early Monday. Breezy northerly winds will return Sunday through Tuesday. Other than some higher elevation rain and snow showers late Wednesday and Thursday, cool and dry weather is expected area-wide late Monday through the end of next week. In general, the front Saturday night and Sunday will begin a period of cool unsettled weather for the next two weeks or more, with increasing amounts of moisture moving in during week two.

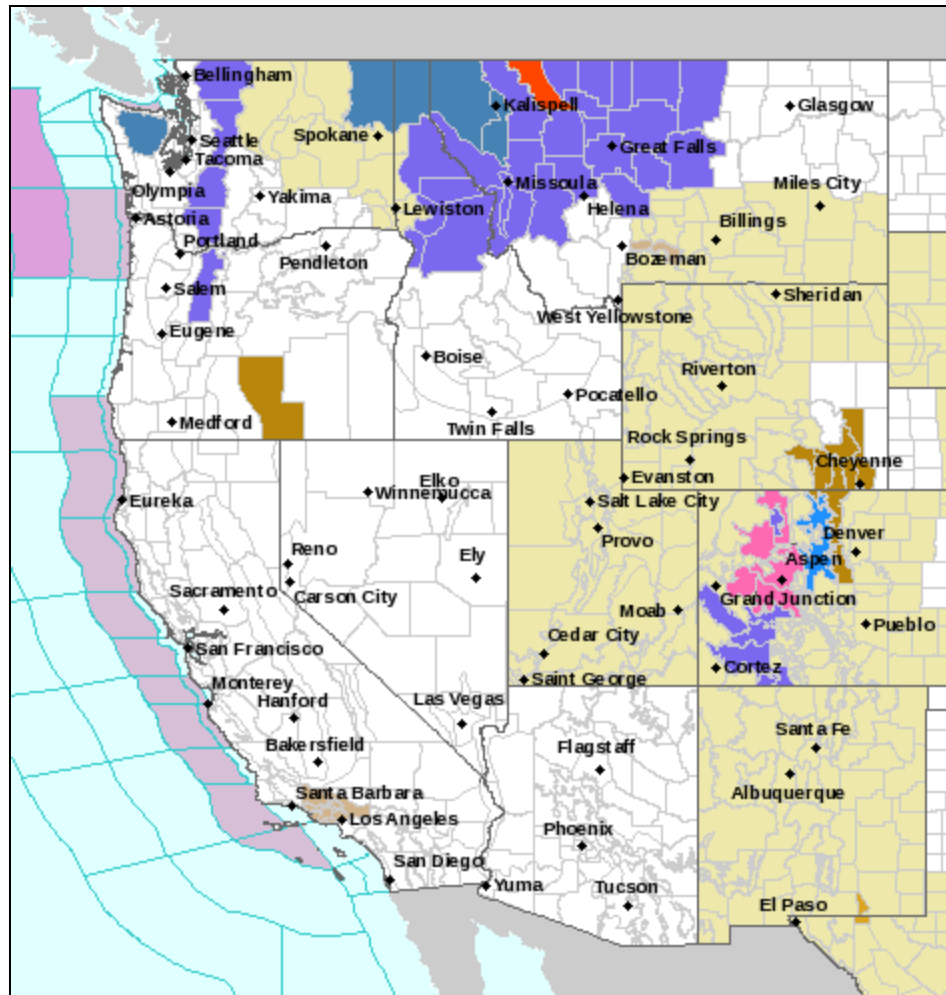

## **SOUTHERN CALIFORNIA**

A trough from Canada will maintain near normal temperatures and fairly high humidity across the region today. Maximum temperatures will be in the mid 40s to mid 50s across the mountains and 60s to low 70s in the valleys. Minimum humidity will be mainly above 30%. Northeast winds of 15 to 25 mph with gusts to 40 mph will surface across the mountains and below the canyons and passes of Southern California tonight, once the trough moves by to the south. Temperatures will warm around 5 degrees and minimum humidity will drop into the teens both Friday and Saturday as a weak ridge of high pressure builds into California from the Pacific Ocean. Winds will be light Friday and Saturday. A deep trough will drop down from Canada which will bring significant cooling to the region Sunday. Temperatures will be well below normal Monday through the middle of next week. Isolated to scattered showers with light rainfall totals will be possible Sunday night through the middle of next week. Strong westerly winds will surface across the mountains and deserts Sunday into early next week.
